

**45 Class**  
*2-cycle engine*

**70 Class**  
*4-cycle engine*

# MESSERSCHMITT BF - 109

## INSTRUCTION MANUAL / Montageanleitung

### TECHNISCHE DATEN

Spannweite	1560mm
Länge	1120mm
Elektroantrieb	G-46 HP Motor
Verbrennerantrieb	7.5cc 2-T / 8.5cc 4-T
Fernsteuerung	5 Kanal / 5 Servos

### SPECIFICATIONS

Wingspan	1560mm
Length	1120mm
Electric Motor	G-46 HP Motor
Glow Engine	7.5cc 2-T / 8.5cc 4-T
Radio	5 Channel / 5 Servos

**WARNING!** This radio controlled model is NOT a toy. If modified or flown carelessly it could go out of control and cause serious human injury or property damage. Before flying your airplane, ensure the air field is spacious enough. Always fly it outdoors in safe areas and seek professional advice if you are unexperienced.

**ACHTUNG!** Dieses ferngesteuerte Modell ist KEIN Spielzeug! Es ist für fortgeschrittene Modellflugpiloten bestimmt, die ausreichende Erfahrung im Umgang mit derartigen Modellen besitzen. Bei unsachgemäßer Verwendung kann hoher Personen- und/oder Sachschaden entstehen. Fragen Sie in einem Modellbauverein in Ihrer Nähe um professionelle Unterstützung, wenn Sie Hilfe im Bau und Betrieb benötigen. Der Zusammenbau dieses Modells ist durch die vielen Abbildungen selbsterklärend und ist für fortgeschrittene, erfahrene Modellbauer bestimmt.

## REQUIRED FOR OPERATION (Purchase separately)

Minimum 5 channel radio for airplane with 5 servos

.Motor control x1 .Aileron x2  
.Elevator x1 .Rudder x1

10.5x6 for .40 - 2 cycle engine  
11x6 for .46 - 2 cycle engine  
12x6 for .60 - 4 cycle engine  
12x7 for .70 - 4 cycle engine  
13x7 - 13x8 for Electric Motor

.46 ~ .50 - 2 cycle

.60 ~ .70 - 4 cycle

Extension for aileron servo, retract servo.

Motor Control

Retract landing gear VQAR02

Retract servo x1

Linkage Stopper x2 (for retract servo)

Silicone tube

Li-Po Battery, 5 cell, 4500mAh

## GLUE (Purchase separately)

Silicon sealer

Cyanoacrylate Glue

Epoxy Glue ( 5 minute type)

Epoxy Glue (30 minute type)

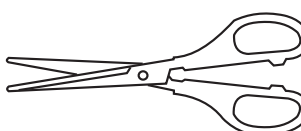

## TOLLS REQUIRED (Purchase separately)

Hobby knife 

Needle nose Pliers 

Sander 

Phillip screw driver 

Scissors 

Hex Wrench 

Awl 

Wire Cutters 

Masking tape - Straight Edged Ruler - Pen or pencil - Rubbing alcohol - Drill and Assorted Drill Bits

The pre-covered film on ARF kit may wrinkle due to variations of temperature. Smooth out as explained right.

\* Use an iron or heat gun. Start as low setting. Increase the setting if necessary. If it is too high, you may damage the film

Symbols used throughout this instruction manual, comprise:

 Drill holes using the stated size of drill (in this case 1.5 mm Ø)

 Take particular care here

 Hatched-in areas: remove covering film carefully

 Check during assembly that these parts move freely, without binding

 Use epoxy glue

 Apply cyano glue

 Assemble left and right sides the same way.

 Not included. These parts must be purchased separately

Read through the manual before you begin, so you will have an overall idea of what to do.

## CONVERSION TABLE

1.0mm = 3/64"	3.0mm = 1/8"	10mm = 13/32"	25mm = 1"
1.5mm = 1/16"	4.0mm = 5/32"	12mm = 15/32"	30mm = 1-3/16"
2.0mm = 5/64"	5.0mm = 13/64"	15mm = 19/32"	45mm = 1-51/64"
2.5mm = 3/32"	6.0mm = 15/64"	20mm = 51/64"	

# 1-Aileron extension cord installation

# 2- Joining the wing

## Before gluing:

- Draw the center line on the wing joiner.
- Trial fit each part before gluing . Be certain that there are no gaps. If the parts will join, but with a gaps, sand or trim the parts a little at a time until the parts meet exactly with no gaps.
- Check for the correct dihedral angle

Coat one half of the dihedral brace with epoxy up to the center line. Install the epoxy-coated side of the dihedral brace into the wing joiner cavity up to the center line.

### 3- Joining the wing

WING TOP-VIEW

**! Make sure to glue securely, If not properly glued, a failure in flight may occur.**

Carefully slide the wing halves together, ensuring that they are accurately aligned. Firmly press the two halves together, allowing the excess epoxy to run out. Note: The two wing halves roots must fit together perfectly. Clear off the excess epoxy.

Hold the wing halves together with paper clamp and rubber band.

WING TOP-VIEW

**IMPORTANT:** Please do not clean off the excess epoxy on the wing with strong solvent or pure alcohol, only use kerosene to keep the colour of your model not fade.

### 4- Retract landing gear

Steel clevis

1-Join the push rod to the retract gear arm and trial fit the retract into the wing.

2-After checking that the retract works smoothly and be sure to adjust the stroke so that the landing gear locks in both up and down position, fix the retracts on the wing with 3x15mm screws

WING BOTTOM-VIEW

## 5- Retract servo mount

## 6- Retract servo

**X** Install the retract servo onto the retract servo mount and secure it in place with four screw (included with radio set).

## 7- Retract linkage

Join the pushrod to the retract servo arm. With the retract landing gear and the retract servo in the extended position, mark the position where each of the linkages will attach to the servo arm. A small piece of masking tape works well for this. Cut off the excess length of each rod.

Be sure to adjust the stroke so that the landing gear locks in both up and down position.

## 8- Gear cover installation

Attach the wheels on the main gear wires(A) with plastic wheel retainers(B) and wheel collars(C) as show. Attach the ABS gear cover(D) on the wires with fitting strap(E) and screws(F) as show.

## 9- Fixed gear

WING BOTTOM-VIEW

Attach the wheels on the main gear wires(A) with plastic wheel retainers(B) and wheel collars(C) as show. Attach the ABS gear cover(D) on the wires with fitting strap(E) and screws(F) as show.

## 10- Aileron servo

WING BOTTOM-VIEW

## 11- Aileron linkage

Plastic control horn

-Switch on the radio (trims centered) then mount the ailerons servo horn in neutral position.  
-The servo horn should be perpendicular to the servo

WING BOTTOM-VIEW

Attach the control horn on the aileron with 2x15mm screws. Screw the clevis halfway on the threaded end of the aileron push rod. Attach the push rod to the aileron horn. Mark the position where the push rod will attach to the servo arm. Cut off the excess length of the push rod

Ensure that the servo is centered. If necessary, adjust the metal clevis so the aileron is also in the neutral position.

## 12- Engine mount

! Align the mark on both mounts with the mark on the fuselage

Note: Engine thrust on balk head is already adjust at factory

Magnetic top hatch

Magnetic piece

FRONT-VIEW

B=B'

1-Pul the magnetic top hatch out of the fuselage

2-Using a pencil or felt tipped pen, mark the fire wall where the four holes are to be drilled.

3-Remove the engine mount and drill a 3/16"(5mm) hole through the fire-wall at each of the four marks made above.

4-Attach the four blind-nut to the fire-wall as show.

5-Reposition the engine mounts on to the fire-wall and secure them with four 5/32x1"(4x25mm) screws.

# 13- Engine

- 3x20mm screw  ...4
-  Nut.....4

- 6- Reposition the engine on the engine mount beams so the distance from the prop hub to the fire wall is 4-51/64" (122mm).
- 7- Mark the engine mounting plate where the four holes are to be drilled.
- 8- Remove the engine and drill 1/8" (3mm) hole through the beam at each of the four marks made above.

- 9- Reposition the engine on the mounting beams, aligning it with the holes drilled. Insert one 1/8x1" (3x25mm) screw through each of the mounting holes. Apply silicon (Blue-Locktile 242) to each of the 3x25mm screw and firmly secure the engine to the engine mount using four 1/8" (3mm) nuts.

# 14- Engine

With hang silencer (Pitts-style)  
SIDE-VIEW **Seitenansicht**

FRONT-VIEW **Vorderansicht**

With side silencer

## 15- Fuel tank

Checking for leaks - block the vents and blow into the feed. if in doubt submersing the tank in a blow of water will show up any problems.

TOP VIEW

Carefully install the fuel tank to ensure that they will not shift during flight (secure the fuel tank in place using foam padding).

## 16- Electric Motor

Using a aluminum motor mounting plate as a template, mark the plywood motor mounting plate where the four holes are to be drilled (2).

Remove the aluminum motor mounting plate and drill a 1/8"(3mm) hole through the plywood at each of the four marks marked .

Note: The aluminum motor mounting included with electric motor set.

## 17- Lipo Battery installation

## 18- Vertical Stabilizer

1-Trial fit the vertical stabilizer in place . Check the alignment of the vertical stabilizer. When you are satisfied with the alignment, use a pencil to trace around the right and left of the stabilizer where it meets the fuselage.

2-Remove the vertical stabilizer from the fuselage. Using the sharp hobby knife, carefully cut away the covering inside the lines which were marked above.

3-Spread epoxy (30 minute) onto the right and left and bottom of the vertical stabilizer along the area where the covering was removed and to the fuselage where the vertical stabilizer mounts.

4-Install the vertical stabilizer into the fuselage and adjust the alignment as described in step 1

5-Wipe off any excess epoxy using a paper towel and rubbing alcohol. Allow the epoxy to cure before proceeding to next step.

**Securely glue together. If coming off during flight, you lose control of your air plane.**

## 19- Horizontal Stabilizer

1-Slide the horizontal stabilizer into the slot of the vertical stabilizer. When you are satisfied with the alignment , use a pencil to trace around the right and left of the vertical stabilizer and the top and bottom of the horizontal stabilizer where the vertical stabilizer meets the horizontal stabilizer.

2-Remove the horizontal stabilizer from the vertical stabilizer.

Using the sharp hobby knife, carefully cut away the covering inside the lines which were marked above.

3-Spread epoxy (30 minute) onto the right and left of the vertical stabilizer, where the covering was removed, and onto the top and bottom of the horizontal stabilizer, where the covering was removed.

4-Again, Slide the horizontal stabilizer into the slot of the vertical stabilizer.

5-Wipe off any excess epoxy using a paper towel and rubbing alcohol. Allow the epoxy to cure before proceeding to next step.

**Securely glue together. If coming off during flight, you lose control of your air plane.**

## 20- Rudder - Elevator

Push the elevator and its hinges into the hinge slots in the trailing edge of the horizontal stabilizer. There should be a minimal hinge gap and the end of the elevator half should not rub against the horizontal stabilizer. When satisfied with the and alignment, hinge the elevator to the horizontal stabilizer using thin CA glue. Make sure to apply a thin layer of CA glue to the top and bottom of both hinges and to inside the hinge slots. Repeat the previous procedures to hinge the second elevator to the other side of the horizontal stabilizer. Do the same way with the rudder.

**Securely glue together. If coming off during flight, you lose control of your air plane.**

## 24- Cowling installation

2.5X8mm screw

## 25- Decor

## 26- Air scoop installation

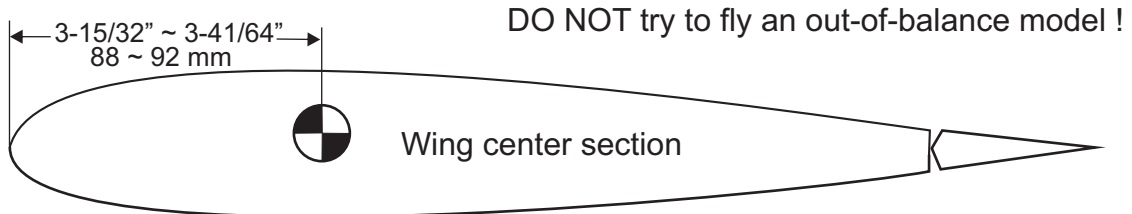

Using the ABS air scoop as a template, trace around the outside edge of the ABS air-scoop and then remove it.  
 Using a sharp hobby knife, cut away the covering inside the lines. Not to cut into the wood.  
 Apply the ABS air scoop in place and secure them with CA glue.

## 27- Control surface

## 28- Balance

## 29- Decal

Note: Cut out the stickers and apply them in the proper area. Do not peel the backing paper off all at once. Peel off one corner of the backing and cut off with scissors.

Arrange sticker on model and when satisfied adhere the corner without backing.

Carefully peel back the rest of the backing while at the same time adhering the rest of the sticker.

Try not to make air bubbles, if there are some, carefully puncture sticker (center of bubble) but not model surface with the tip of the knife or sharp pin and squeeze out the air.

At curves stretch sticker and apply a little heat so that no creases occur.

Cut off the excess that is produced.

**IMPORTANT:** Please do not clean your model with pure alcohol, only use liquid soap with water or use glass cleaner to clean on surface of your model to keep the colour not fade.
